AUTHOR INDEX FOR VOLUME 94 817

CUMULATIVE SUBJECT INDEX FOR VOLUMES 91–94 821

INFORMATION FOR AUTHORS

Experimental Neurology is an international journal publishing in English the results of original experimental research in the neurological sciences. Articles reporting experimental data of fundamental clinical research relevant to basic neuroscience principles may be considered. Preliminary articles, reviews, and case reports are not accepted. Papers concerned primarily with new procedures or apparatus are considered only when a new principle is involved or greatly improved results are obtained and when evidence of the superiority is clearly borne out by application to the nervous system. Policy regarding publication of experiments on unanesthetized animals conforms with the standards for use of laboratory animals established by the Institute of Laboratory Animal Resources, U.S. National Academy of Sciences. Experiments in which curariform agents are used must be justified and details as to steps taken to reduce or avoid distress to the animal must be provided, particularly with regard to electrical stimulation. Exposition must be as brief as is consistent with accuracy and clarity. Lengthy bibliographic lists should be avoided. Submit manuscript in triplicate (original typescript and two copies) to: **Brain Research Institute, Editorial Office *Experimental Neurology*, University of California, Los Angeles, California 90024.**

Manuscripts are accepted for editorial review with the understanding that the content has not been published previously except as a preliminary report and is not submitted elsewhere for publication. **Furthermore, it is understood that they will have received the appropriate clearance and the approval of all authors necessary for publication prior to submission.**

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Preparation of Manuscript. Type manuscripts double-spaced throughout, including acknowledgments, abstract, and references, on 21.6 × 28-cm sheets, and in *Experimental Neurology* format. Most recommendations of the Council of Biology Editors are to be followed; consult the *CBE Style Manual*, 5th ed., $24 Council of Biology Editors, 9650 Rockville Pike, Bethesda, MD 20814).

All authors are encouraged to limit the length of manuscripts submitted to about 17 pages (21.6 × 28 cm) double-spaced, including tables and figures (about 10 printed pages). It may be necessary to levy charges for longer manuscripts to defray excess costs of publication. Halftones are charged at cost.

Research Notes. Short manuscripts of no more than 5 or 6 double-spaced typed pages and limited to 1 figure and/or table (approximately 4 printed pages) will be considered. They should have an abstract of a few sentences, but no section headings.

Spelling. Follow *Webster's New International Dictionary*, Third Edition, Unabridged (1969) for spelling and division of words. Nonstandard abbreviations should be minimal.

Numerals. Use numerals with standard units of measurement and for any number above nine. The metric system must be used and abbreviations made according to the International System (*Standard Metric Practice Guide*, American Society for Testing Materials, Philadelphia, 1970).

Illustrations. The maximum available page space is approximately 12 × 18 cm. Each component of a composite figure should be lettered on the lower left face and referred to in text and caption. All lettering must be done with professional skill or with "Artype" characters. For best reproduction provide clear, sharp, glossy prints with adequate contrast. The best results will be obtained if authors match the contrast and density of all figures appearing on a single plate. If this is not possible, provide unmounted original art. Providing an overlay that indicates the most critical areas of micrographs will also aid in ensuring high-quality reproduction. Halftone reproduction of illustrations will be charged to authors. Figure captions should be typed (double-spaced) continuously on a separate page, with each caption beginning on a new line; it is not necessary to use a separate page for each caption.

Tables. Organize tables horizontally on the page if possible. Footnotes to tables should be typed immediately below the tables and referred to with superscript, lowercase, italicized letters.

Title page. A short title of no more than 40 characters (to be used as the running head) should appear on the title page, with the name, address, and *telephone number* of the author with whom editors and publisher may communicate.

Acknowledgment. Incorporate all acknowledgments into a single footnote to authors' names.

Abstract. Summarize the problem, the methods, and the results and their significance in a single paragraph of 250 words or less.

References. Use numerals in parentheses in the text. List references alphabetically and number consecutively, but do not incorporate "personal communications" or "unpublished observations" into this list. Abbreviations of journal titles should conform to *Index Medicus*, a complete list of which appears in its December issue. Note below some examples of punctuation and format for *Experimental Neurology*.

1. CARRER, H. F., AND C. H. SAWYER. 1976. Changes in multiunit spike activity in the rat preoptic area induced by stimulating the midbrain. *Exp. Neurol.* **52:** 525–534.
2. CARLSON, B. M. 1972. *The Regeneration of Minced Muscles*, Monographs in Developmental Biology, Vol. 4. Karger, Basel.
3. VILLABLANCA, J. 1972. Specialized lesions: Cerveau isolé and encephale isolé. Pages 285–302 in R. D. MEYERS, Ed., *Methods in Psychobiology: Laboratory Techniques in Neuropsychology*. Academic Press, New York/London.

Proofs. Two sets of galley proofs and the original manuscript are sent to the author designated to receive them. To avoid delay in publication, only necessary changes should be made, and proofs and manuscript should be returned promptly.

Reprints. Authors may order reprints, using the order form provided with the galley proofs.
